

Section / Elevation

Plan

The steel hoop fence is used in parks and gardens throughout the municipality.

The steel hoop fence is used to protect flower beds & edges, and where there is a desire to create paths through turf areas.

Support posts are to be 150mm square galvanised steel. The hoops are to be fabricated from alternating round & square solid sections then hot dipped galvanized.

Concrete footing / mowing strip to be 'Charcoal' coloured, achieved by adding 15kg/m³ black oxide 'Bayer 318', or approved equal, to concrete mix prior to pouring.

For fabrication & installation drawings, refer to City of Melbourne, City Design drawings;
